

Android 通知栏权限是否开启

需要分系统版本来操作，4.4 版本一下不处理，4.4 到 8.0, 8.0 以上：

```
@RequiresApi(api = Build.VERSION_CODES.KITKAT)
public static boolean isNotificationEnabled(Context context) {
    if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.O) {
        //8.0 手机以上
        if (((NotificationManager)
context.getSystemService(Context.NOTIFICATION_SERVICE)).getImportance
() == NotificationManager.IMPORTANCE_NONE) {
            return false;
        }
    }
    String CHECK_OP_NO_THROW = "checkOpNoThrow";
    String OP_POST_NOTIFICATION = "OP_POST_NOTIFICATION";
    AppOpsManager mAppOps = (AppOpsManager)
context.getSystemService(Context.APP_OPS_SERVICE);
    ApplicationInfo appInfo = context.getApplicationInfo();
    String pkg = context.getApplicationContext().getPackageName();
    int uid = appInfo.uid;
    Class appOpsClass = null;
    try {
        appOpsClass = Class.forName(AppOpsManager.class.getName());
        Method checkOpNoThrowMethod =
appOpsClass.getMethod(CHECK_OP_NO_THROW, Integer.TYPE, Integer.TYPE,
        String.class);
        Field opPostNotificationValue =
appOpsClass.getDeclaredField(OP_POST_NOTIFICATION);
```

```
        int value = (Integer)
opPostNotificationValue.get(Integer.class);
        return ((Integer) checkOpNoThrowMethod.invoke(mAppOps, value,
uid, pkg) == AppOpsManager.MODE_ALLOWED);
    } catch (Exception e) {
        e.printStackTrace();
    }
    return false;
}
```
